

Test Certification

about an expert allergological investigation on „Zubora 50 H Plus“

The above mentioned preparation has underwent an investigation supervised by an expert dermatologist-allergologist.

Certified by an epicutaneous Patch Test according to international directions no toxic or allergologic reactions were to be read.

From these results it can be concluded that the preparation tested will not lead to adverse skin reactions because of skin irritation in practical and proper use.

No prediction can be given concerning the development of toxic skin reactions by increasing concentration of product or development of allergic contact reactions in mid- or long-term usage of preparation.
