

Technical Data Sheet

Divinol Entschäumer 7519

Product description

- de-foamer emulsion
- on the basis of organo-modified polyethersiloxane
- low-viscosity
- no disturbances during the following process of painting and surface treatment
- dispersible in water
- inhibits or fights foam formation in aqueous systems

Characteristics

Colour / Appearance:	milky, white
Density/20°C / DIN EN ISO 12185 :	1000 kg/m ³

Application

Divinol Entschäumer 7519 is used for de-foaming of water-mixed cooling lubricants. The product has good dispersing characteristics in water and can therefore be added without any difficulty to aqueous emulsions in case of foam problems.

Working concentration

0.005 to 0.03 %.

Storage

Divinol Entschäumer 7519 should be stored frost-protected in closed packages.
